PROFESSIONAL SUMMARY

Full-stack developer specializing in backend development, with hands-on experience designing and shipping multi-tenant SaaS platforms, e-commerce systems, and real-time applications. Skilled in Node.js, NestJS, React.js, and REST/GraphQL API design, with a track record of owning projects end-to-end from requirements gathering through deployment. Adopts an agentic, AI-assisted development workflow — using AI coding agents and Model Context Protocol (MCP) tools to accelerate implementation, automate repetitive engineering tasks, and manage multi-step development pipelines — while maintaining code quality and architectural ownership.

TECHNICAL SKILLS

Languages: JavaScript, TypeScript, Java, PHP, Python, C#

Backend: Node.js, Express.js, NestJS, .NET, ASP.NET Core, REST APIs, GraphQL, WebSockets, WebRTC

Frontend: React.js, Next.js, Angular, HTML, CSS, Tailwind CSS, SCSS

Databases: MySQL, PostgreSQL, MongoDB

Tools & Platforms: Git, GitHub, Docker, Postman, Swagger, Jest, VS Code

AI-Assisted / Agentic Development: Agentic programming workflows using OpenCode and Codex for feature development, debugging, and refactoring; Model Context Protocol (MCP) tool integration and management; AI-assisted code generation, documentation, and testing; prompt engineering for development workflows

EXPERIENCE & PROJECTS

Developed 3 multi-tenant SaaS platforms and 2 full-stack e-commerce systems for clients, covering the full development lifecycle from requirements gathering to deployment.

EduTool — Multi-Tenant School Management System

April 2026 – Present

- Built a comprehensive school management platform supporting academic management, student enrollment, and multi-role user accounts (admin, educator, student) using a multi-tenant architecture.
- Implemented educator tools including AI-assisted content generation, a presentation builder, video meetings, and real-time chat to support remote and in-class instruction.
- Applied an AI-assisted, agentic development workflow to accelerate feature delivery across the platform's backend and frontend modules.

APPTel — Multi-Tenant Hotel Management System

May 2026

- Developed a full hotel booking and management platform supporting multi-hotel browsing and budget-based filtering for guests.
- Built folio management, service tracking, and admin dashboards to support day-to-day hotel operations and reporting.

ResorTopia — Multi-Tenant Resort Management System

July 2026 – Present

- Developed a full resort management platform enabling users to manage bookings and plan spending through a dedicated budgeting feature.
- Designed budget-based recommendation logic to help users identify the most suitable resort based on their budget.

Starbucks Clone — Ordering & Inventory Management System

November 2025

- Built an ordering system with an admin dashboard for sales tracking, inventory management, and recipe/ingredient control.
- Implemented a complete order processing workflow from item selection through fulfillment.

Chatly — Real-Time Social Messaging Platform

November 2025

- Built a social platform featuring authentication, posts, a friend system, and real-time chat functionality using WebSockets.

Veterinary Expert System

November 2025

- Designed a rule-based decision system for predicting dog health conditions using structured input data and decision logic.

Offline Applications (C# .NET / Electron)

- Developed standalone desktop and browser-based offline tools tailored to client-specific operational requirements.

EDUCATION

College of Mary Immaculate — Poblacion, Pandi, Bulacan

August 2022 – Present

Bachelor of Science in Computer Science

Relevant Coursework: Software Engineering, Web Development, Quality Assurance, Database Systems
